

# Fishing Pier vs. Snorkel Reef: Which Gets the Most Diverse Floral and Faunal Communities

By Catheline Froehlich

Dauphin Island Sea Lab

NSF Postdoctoral Research Fellow in Biology

# Artificial Reefs: why are communities different?

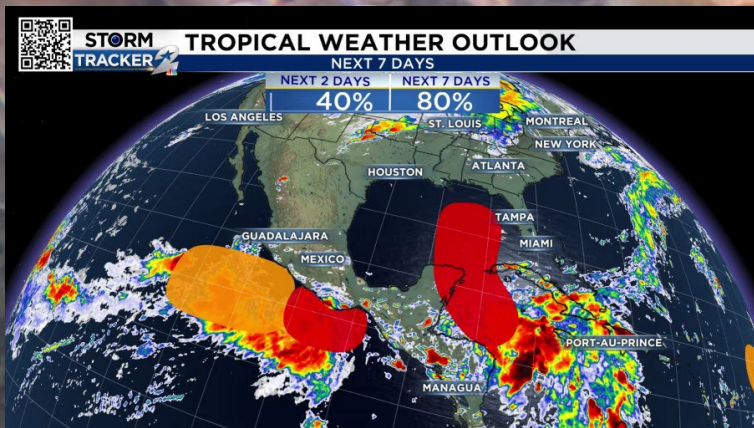

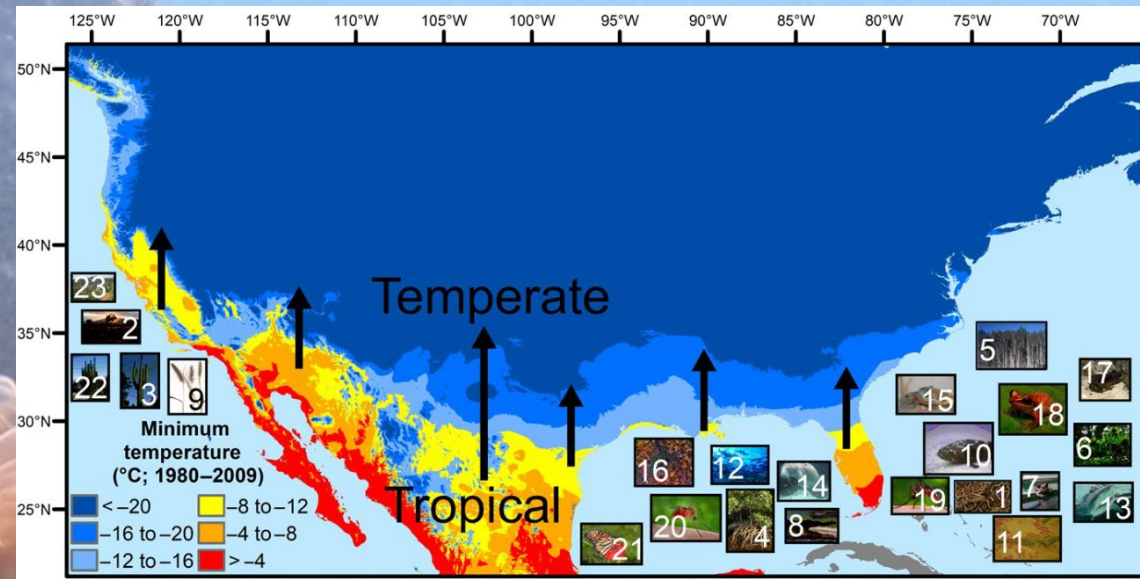

- Location
- Depth, type of ocean floor
- Type of microhabitat, material
- Spacing between reefs
- Vertical relief
- Fishing pressure
- Tourism pressure
- Etc.

Most studies focus on fish  
only

**Tropicalization:**  
tropical organisms moving  
to temperate areas  
(not just juveniles)

# STUDY AIMS

- Compare two different reef types at the same location
  - Are vertebrate and invertebrate communities the same?
- Determine if tropicalization is occurring
- Compare sampling methods

# STUDY LOCATION

# Snorkel reef:

- Navarre Beach Marine Sanctuary
- No fishing allowed, but swimming
- 300-400ft offshore
- 10-15ft deep, submerged
- sometimes a surface buoy

# Navarre Pier:

- Fishing pier
- No swimming
- Shore to 1500ft out
- From surface down to 30 ft deep

VERTEBRATES (fish,  
sharks, mammals, etc.)

# METHODS

INVERTEBRATES (snails,  
sponges, crabs, jellyfish,  
etc.)

## Snorkel surveys

- 45 min at structure
- sand control 100m away

# METHODS

## iNaturalist

- free, everyone can post
- Citizen science: help with IDs
- Research grade IDs

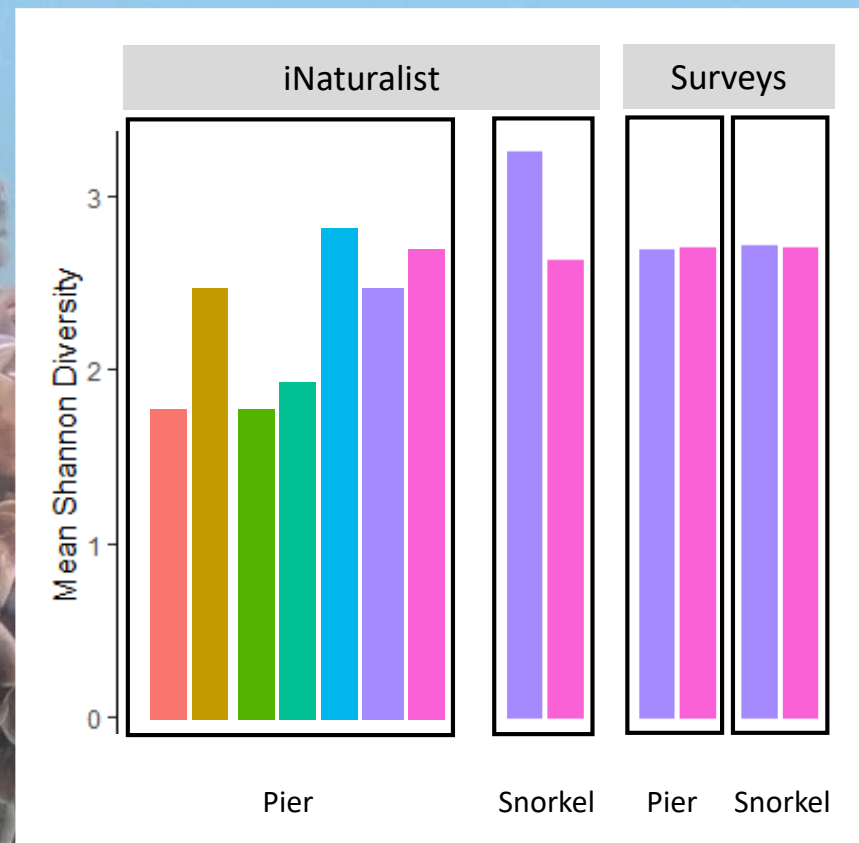

The screenshot shows the iNaturalist website interface. At the top, there is a search bar and navigation links for 'Explore', 'Your Observations', 'Community', 'Identify', and 'More'. A green 'Upload' button is in the top right corner. The main content area features a large image of a coral reef structure with the text 'Navarre Marine Life, Navarre, Florida, USA' overlaid. To the right of this image is an 'About' section with a 'Members' count of 3, a description of the project, and links for 'Read More', 'Your Membership', 'Edit Project', and 'Project Journal'. Below the main image is a list of three observations:

Image	Species Name	Genus	Grade	Time
	Sharksucker	<i>Echeneis naucrates</i>	RG	1 23 days ago
	Moon Jellies	Genus <i>Aurelia</i>	RG	2 23 days ago
	Indo-Pacific Swimming Crab	<i>Charybdis hellerii</i>	RG	2 23 days ago

On the left side of the observation list, there is a search bar for 'Species name', a date field '2024/09/24 1:41 PM', a location field, and a 'Notes' field.

# VERTEBRATES (fish, sharks, mammals, etc)

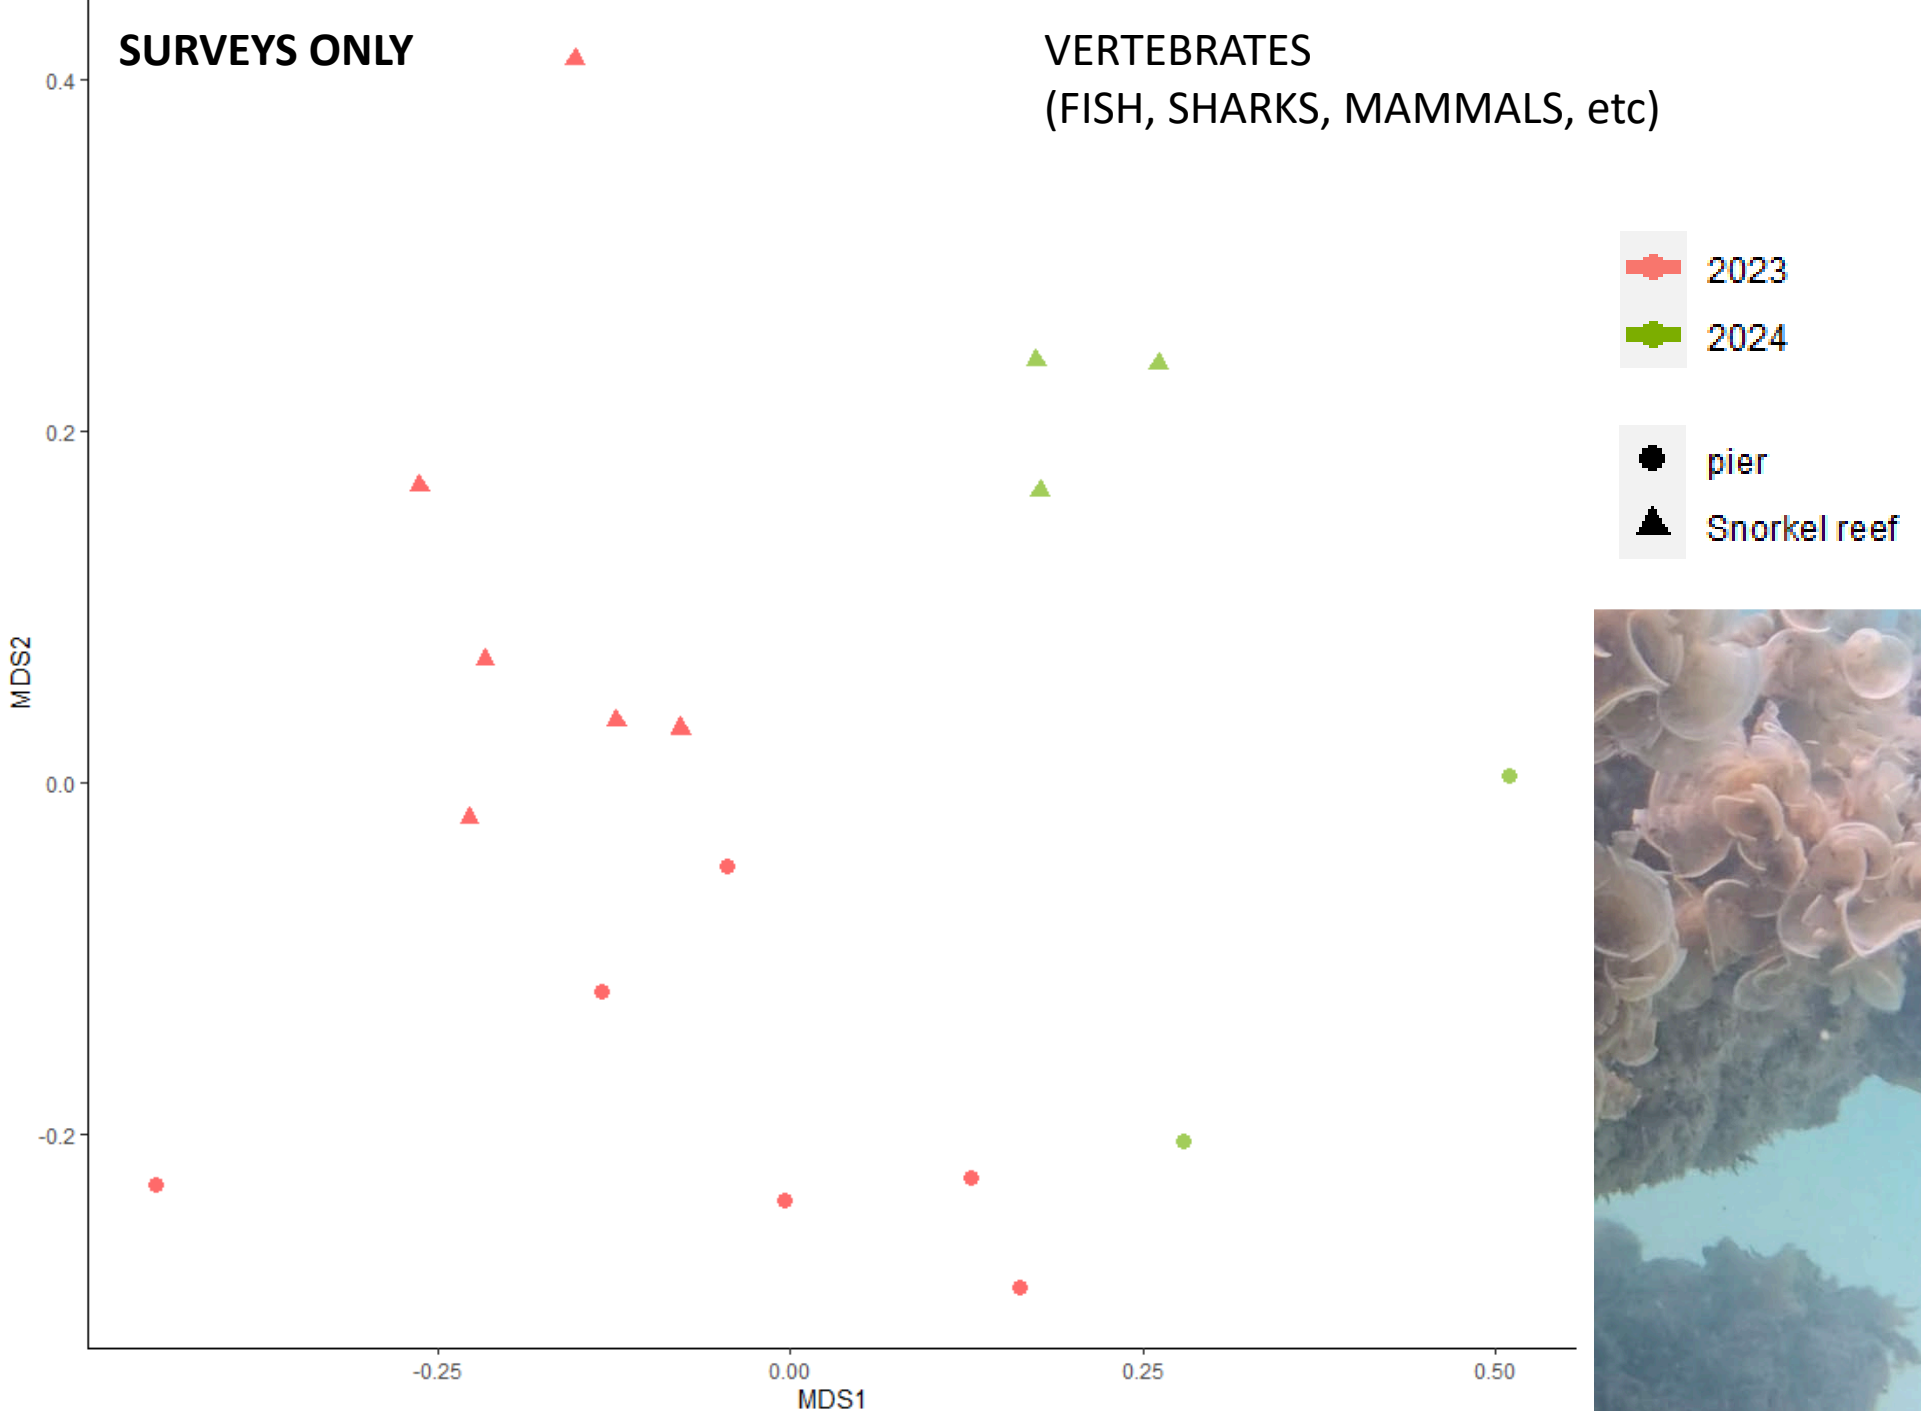

iNaturalist had fewer species observed until 2023.  
The snorkel reef had more species in 2023 than 2024.

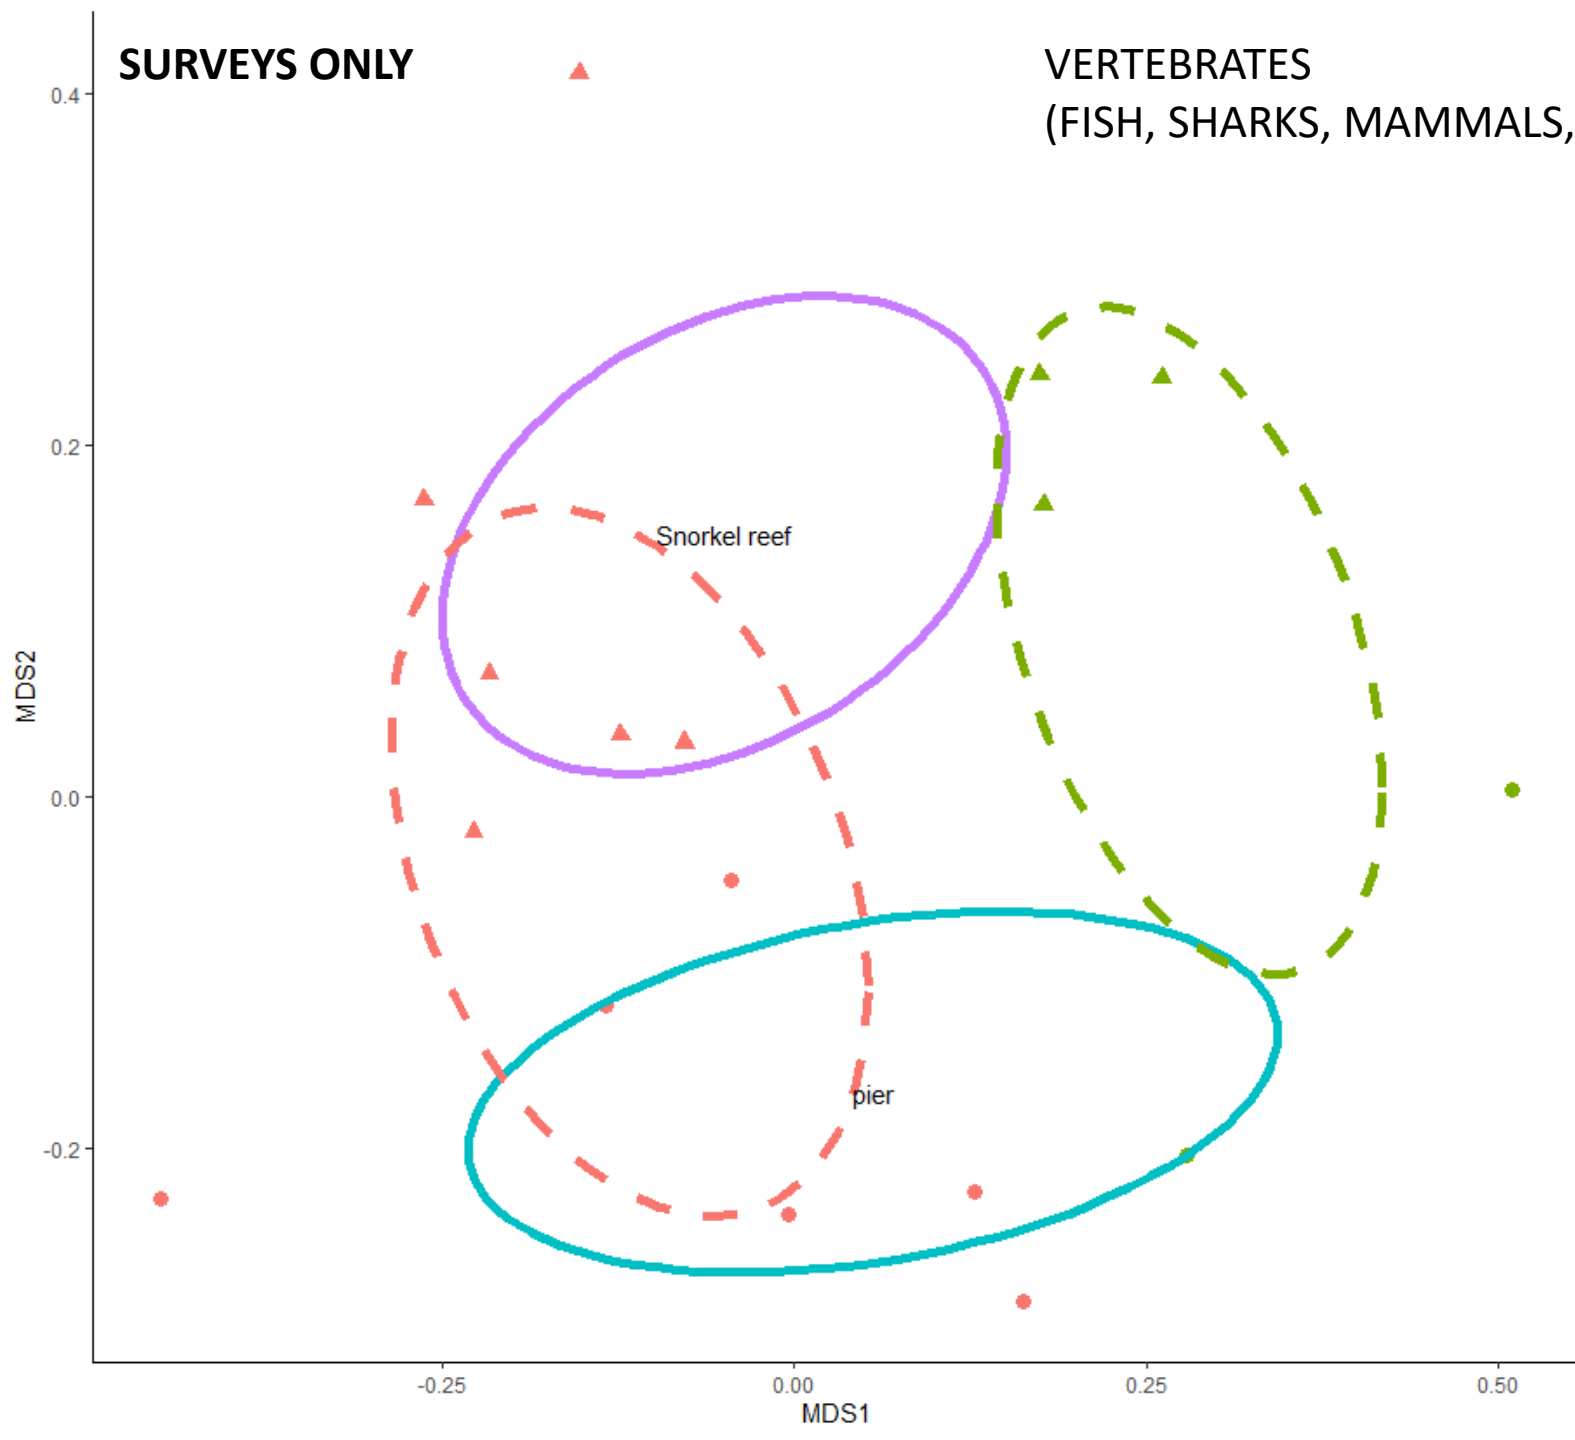

**SURVEYS ONLY**

**VERTEBRATES**  
(FISH, SHARKS, MAMMALS, etc)

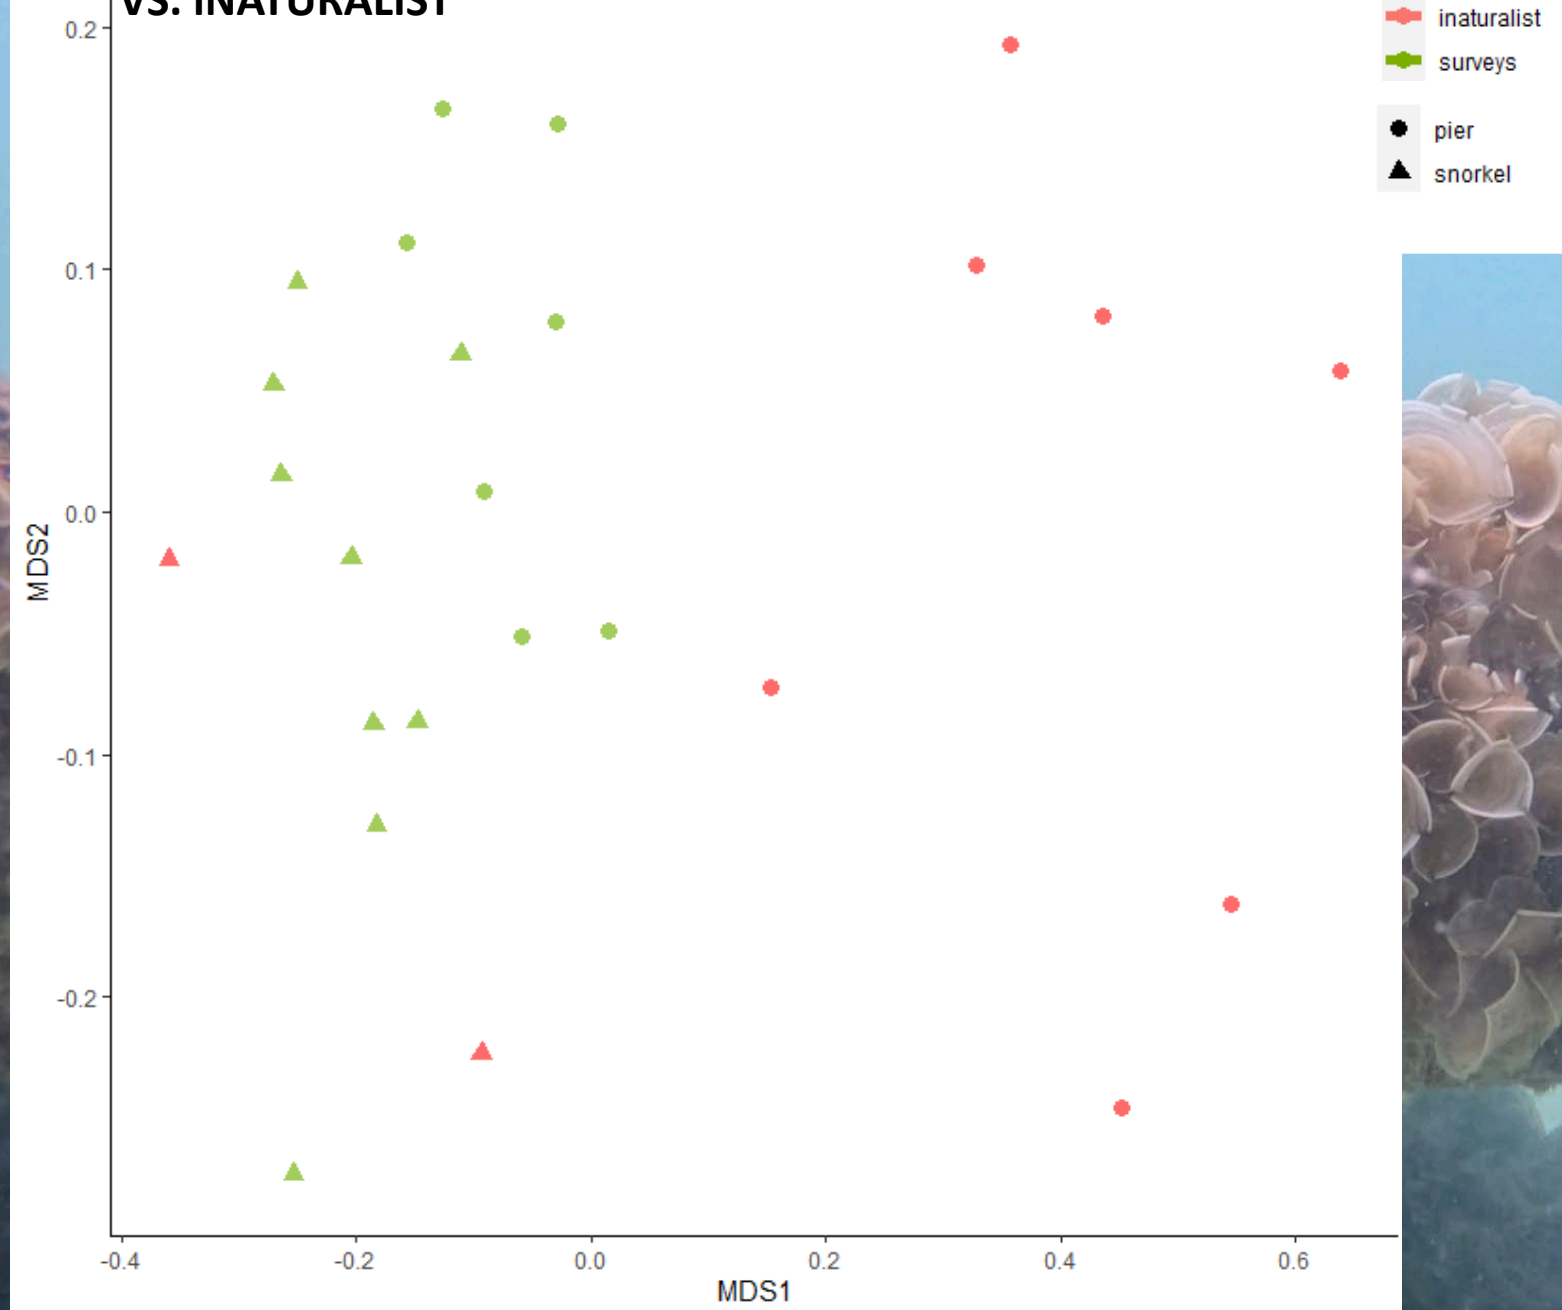

# SURVEYS VS. iNATURALIST

# VERTEBRATES (FISH, SHARKS, MAMMALS, etc)

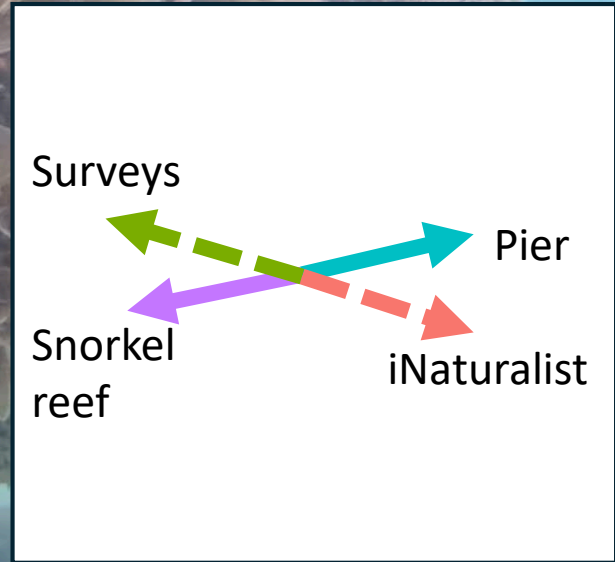

# SURVEYS VS. iNATURALIST

VERTEBRATES (FISH, SHARKS, MAMMALS, etc)

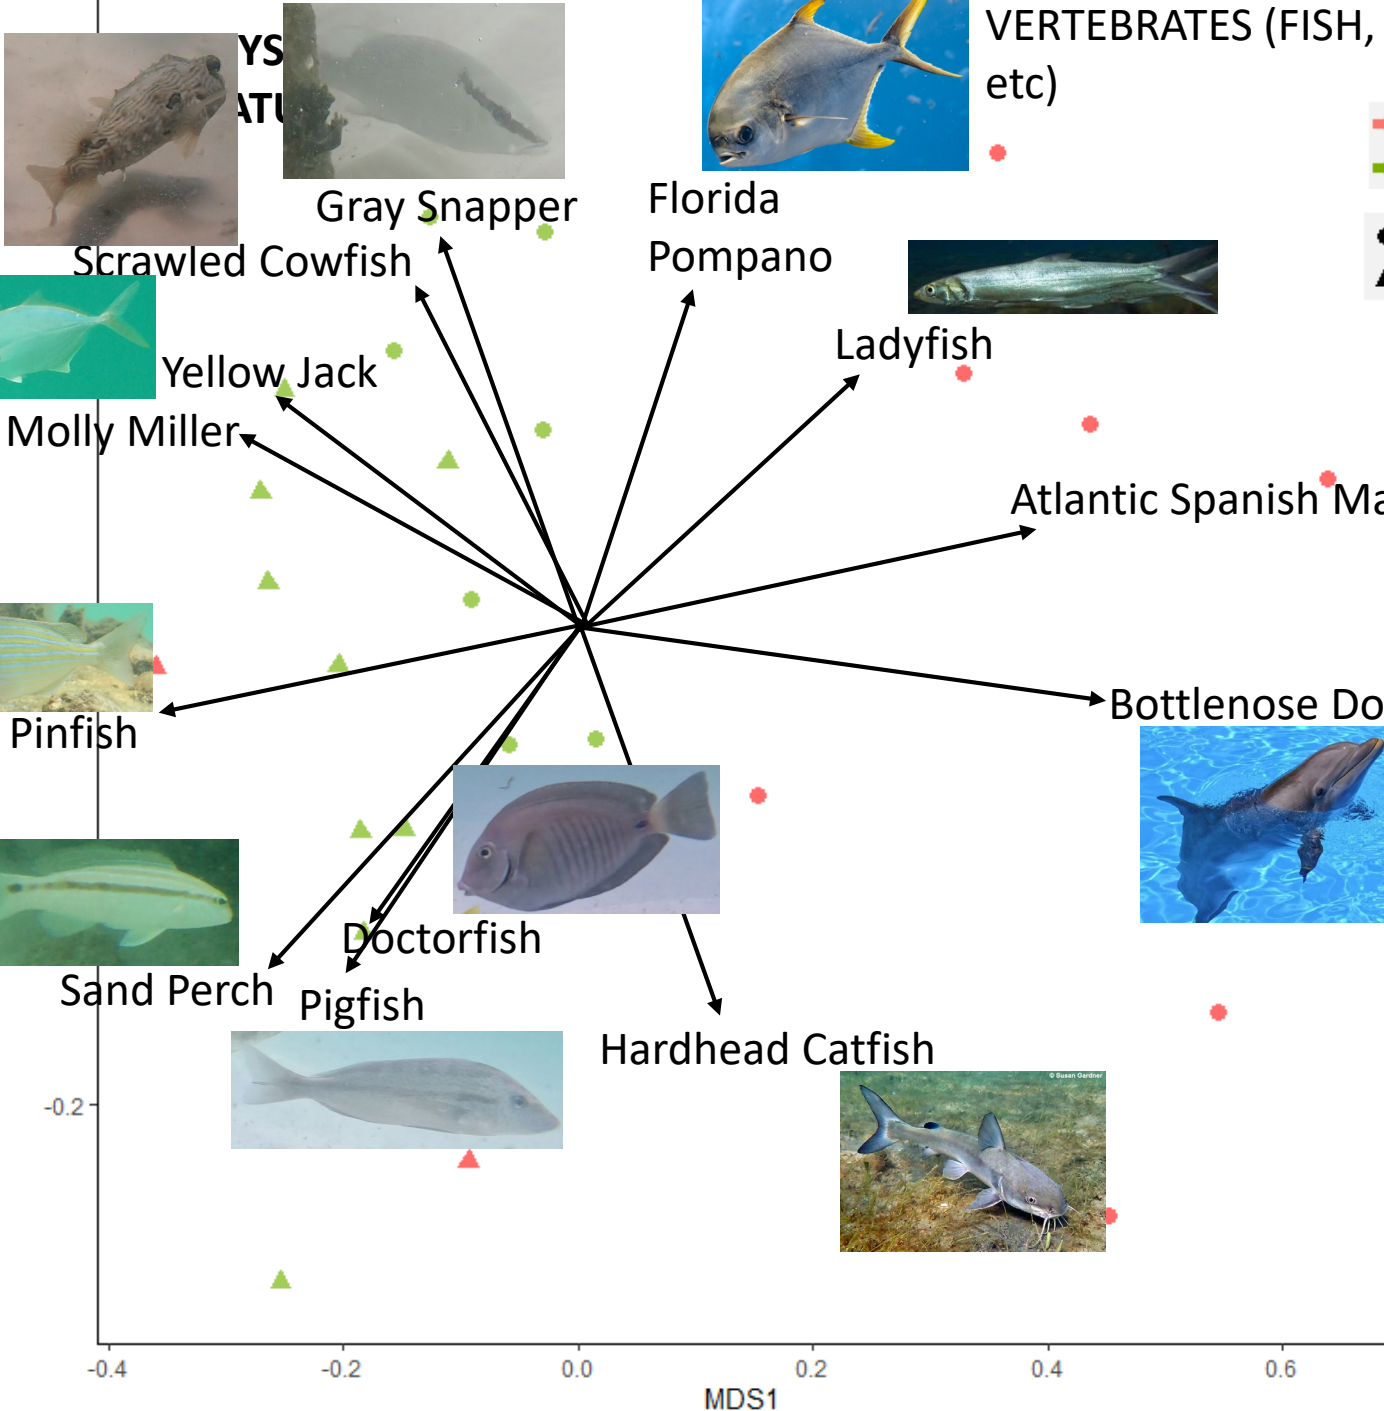

- iNaturalist
- surveys
- pier
- snorkel

VERTEBRATES (FISH, SHARKS, MAMMALS, etc)

- inaturalist
- surveys
- pier
- ▲ snorkel

# TROPICALIZATION?

2023:

Juvenile blue tang

Juvenile/adult  
cocoa damselfish

Adult doctorfish

Juvenile/adult  
planehead filefish

2024:

Juvenile  
cocoa damselfish

Juvenile/adult doctorfish

Juvenile planehead filefish

Juvenile  
redband parrotfish

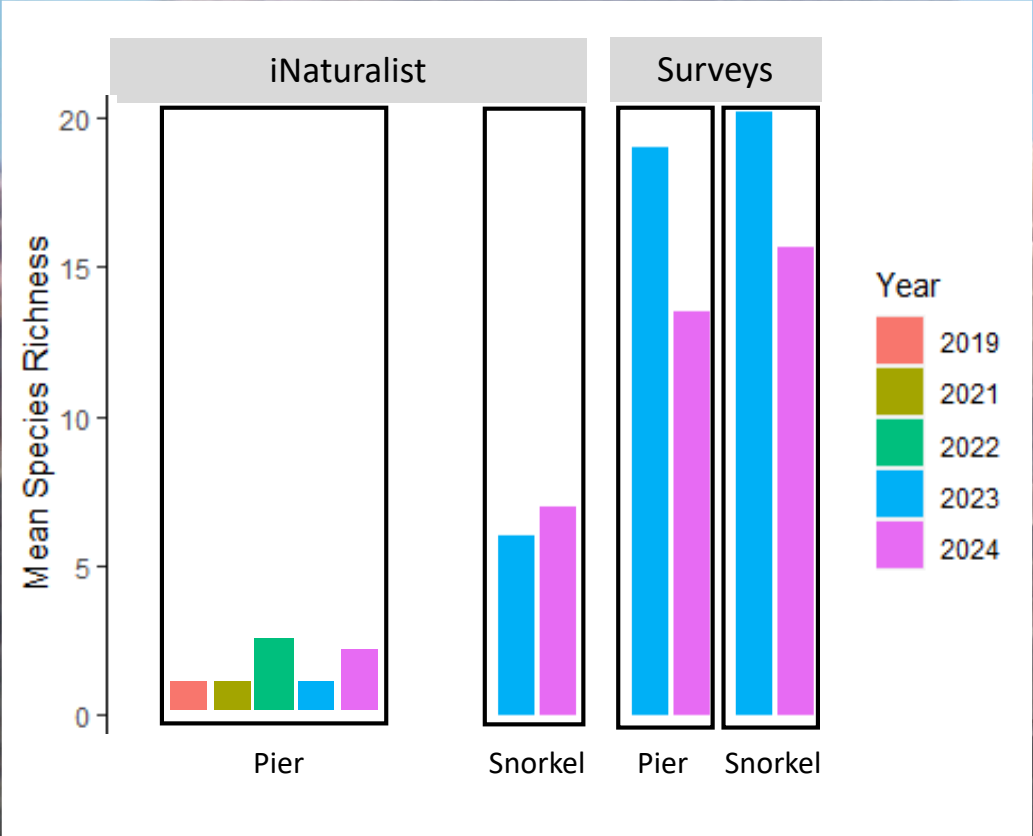

Juvenile lane snapper

# INVERTEBRATES

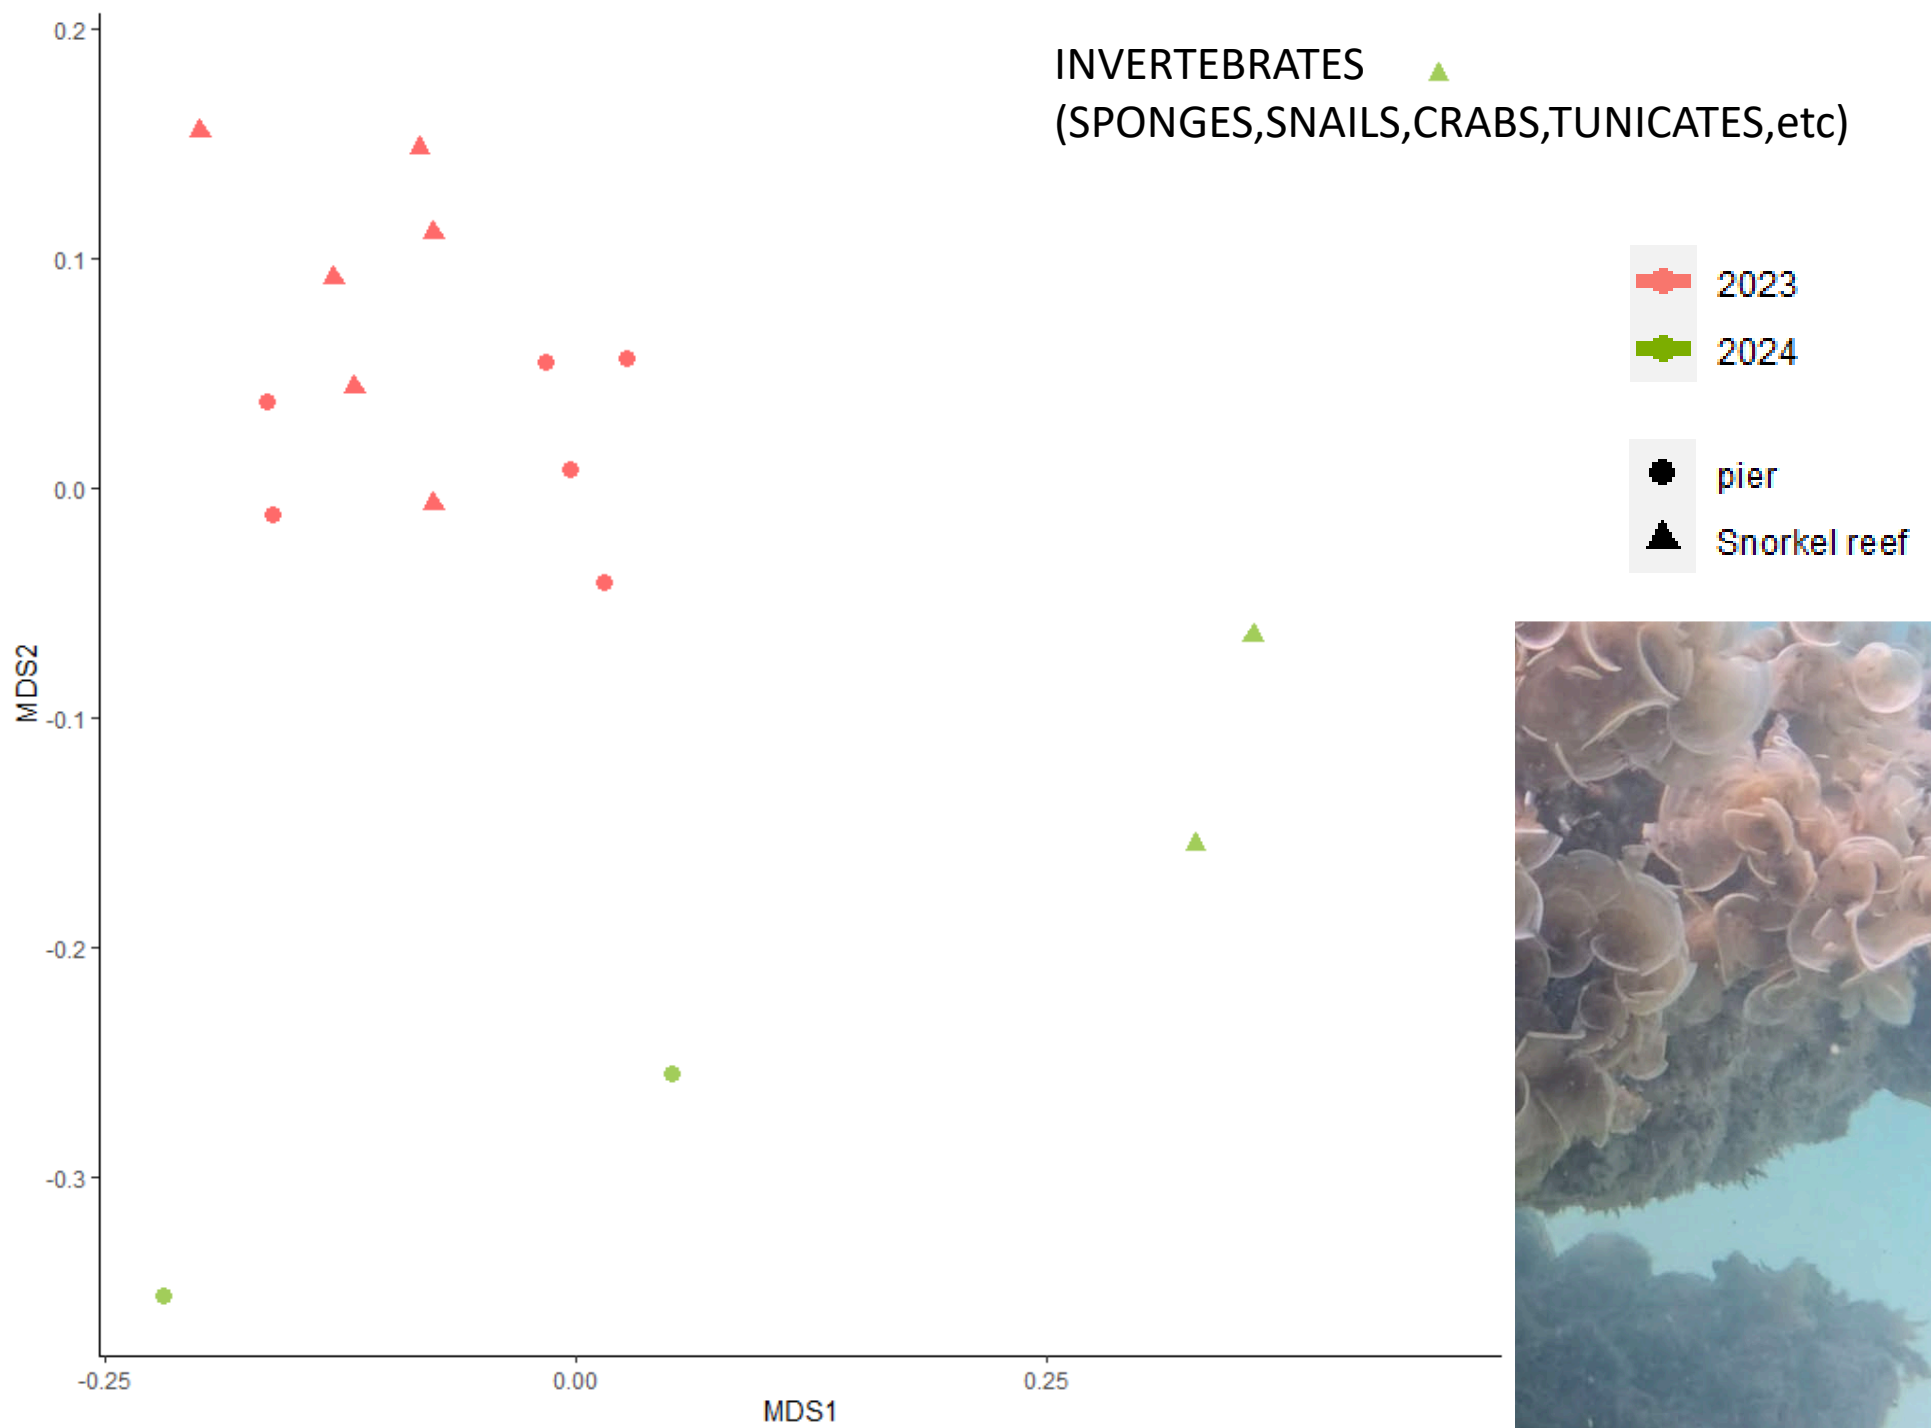

(sponges, snails, crabs, tunicates, etc)

Very few species from iNaturalist. Too few observations.  
More invertebrates in 2023 than 2024.

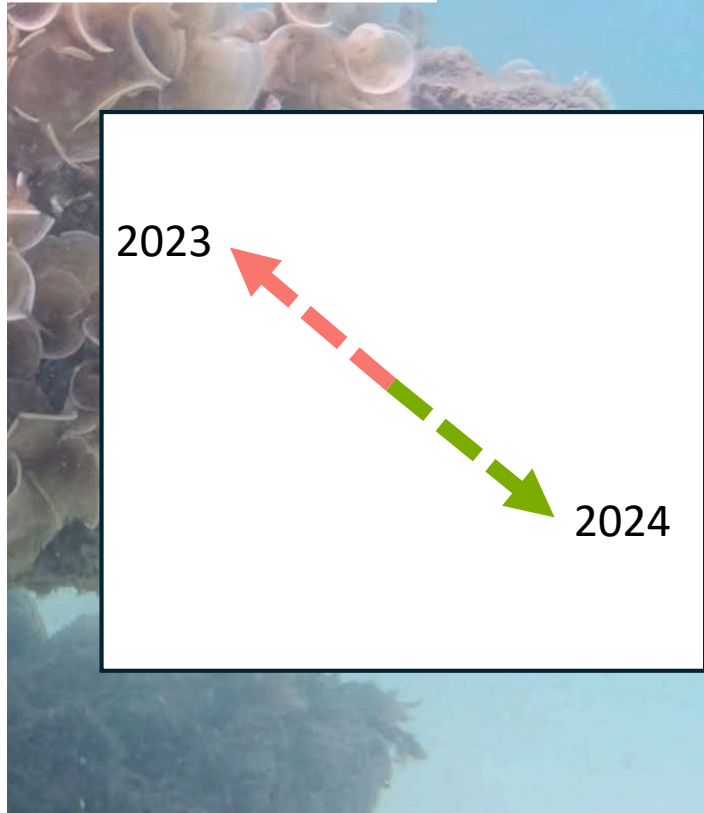

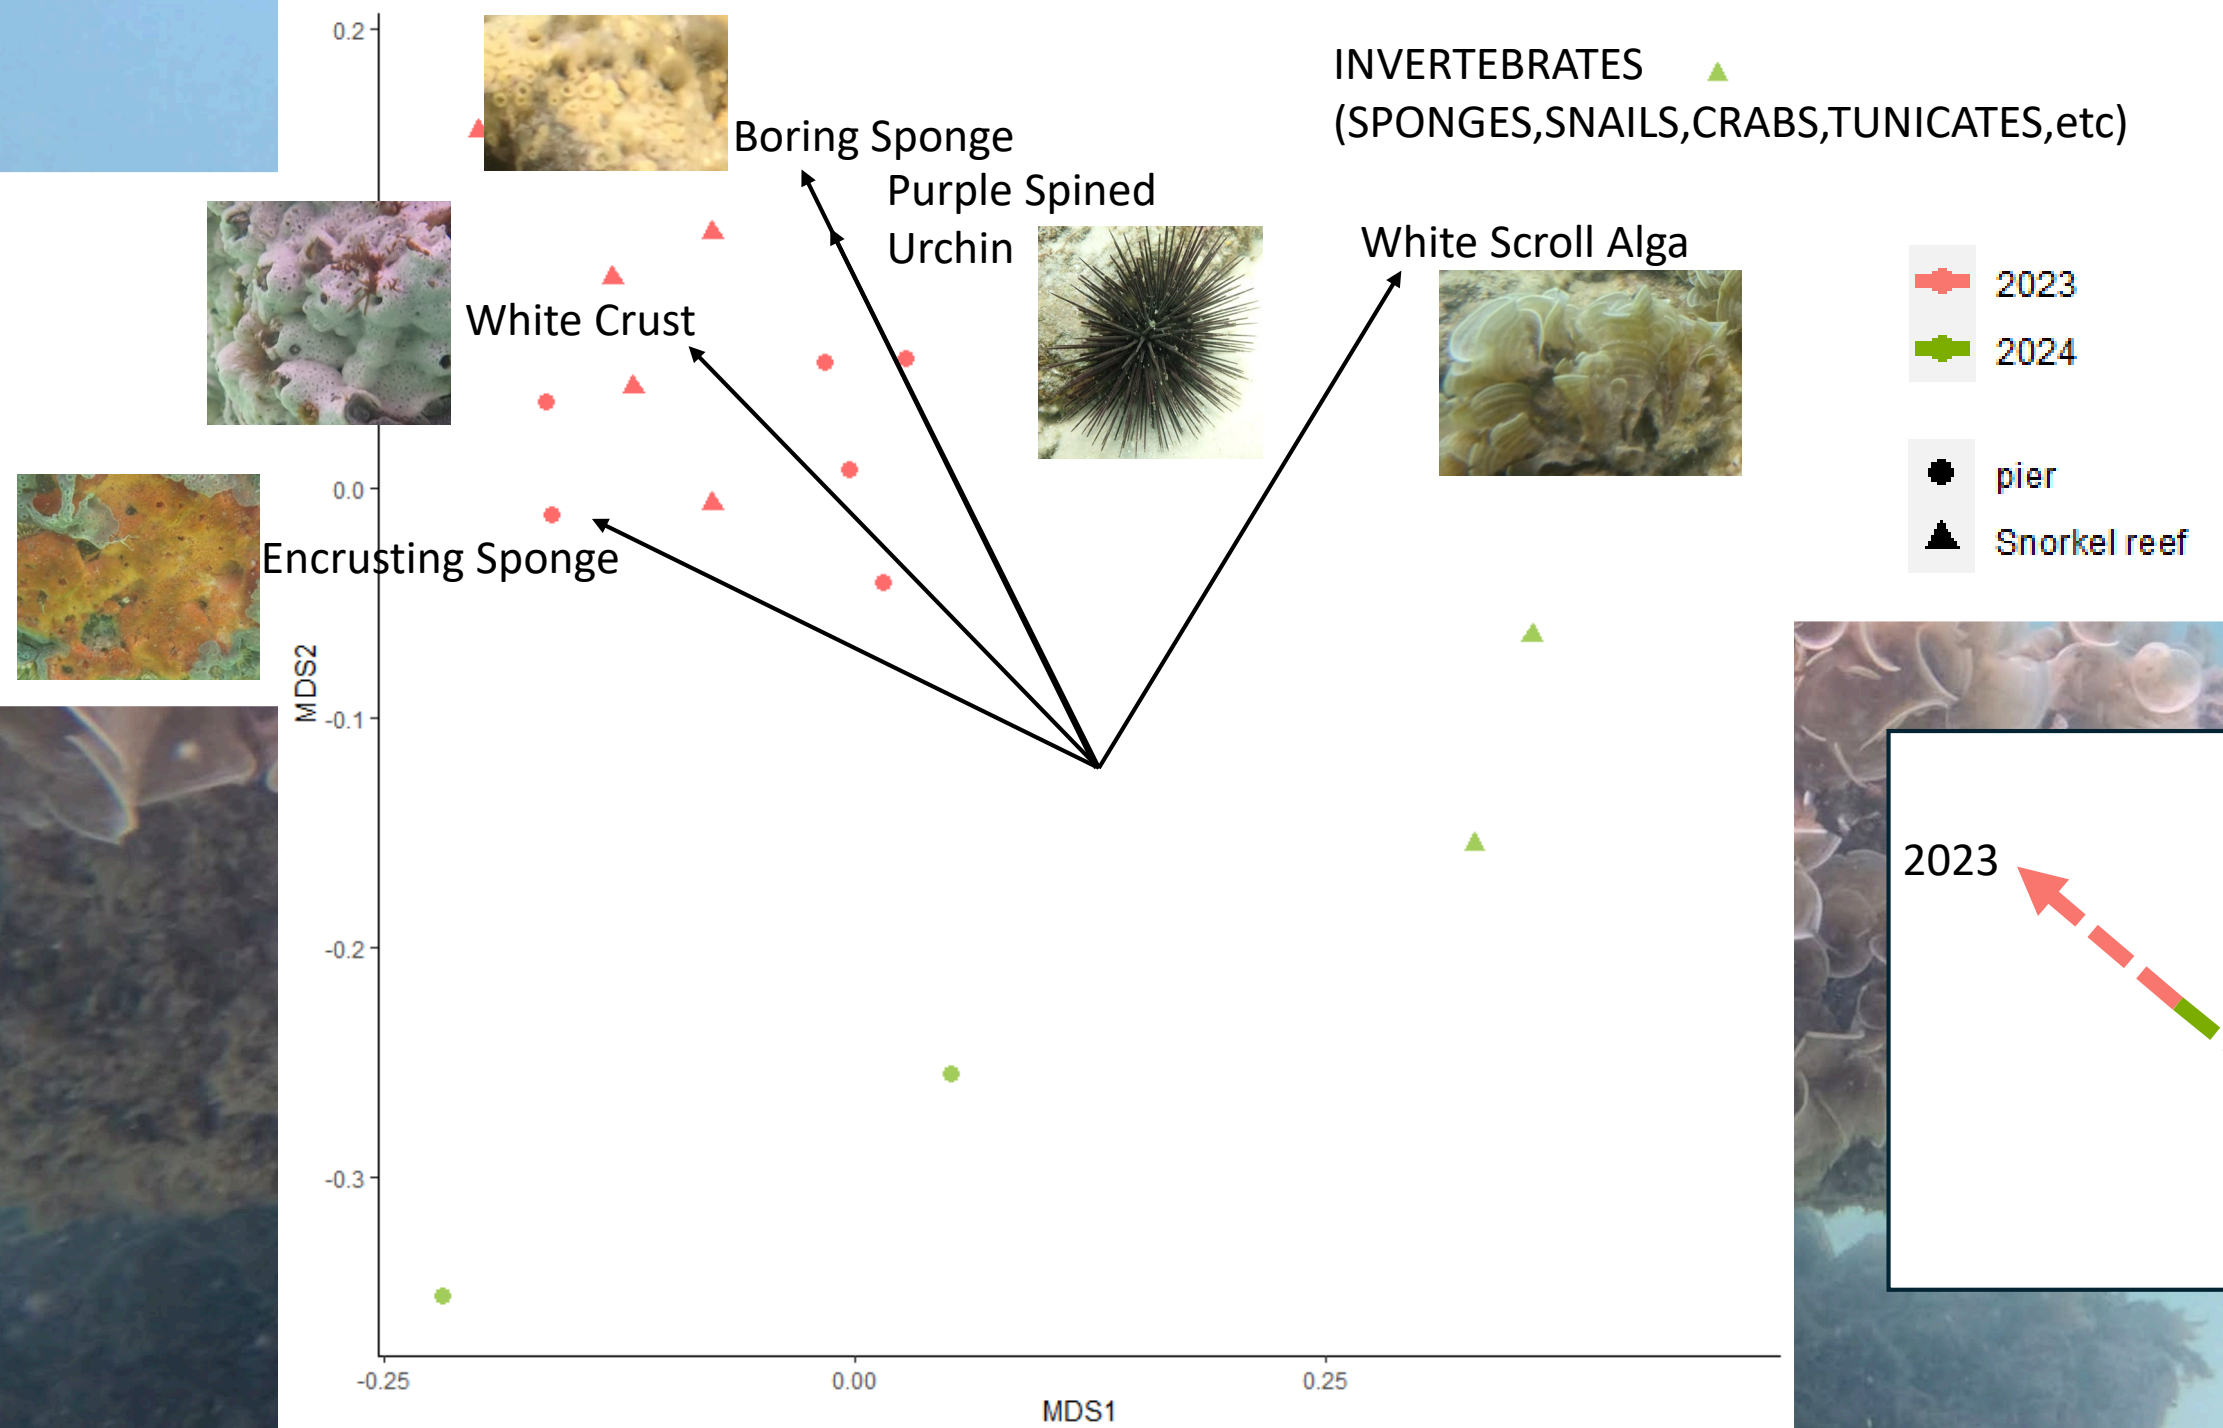

INVERTEBRATES  
(SPONGES,SNAILS,CRABS,TUNICATES,etc)

2023

2024

# SUMMARY

- Snorkel reef and pier have different communities of vertebrates but not invertebrates
- Different communities & more species in 2023 than 2024
- Tropicalization? Some evidence
- iNaturalist is great for getting vertebrates that we aren't seeing underwater = but need more enthusiasts!!

Thank you
